

INNOVATION RADAR

“Automated” Signal-to-Opportunity Engine

Turning raw public-procurement signals into structured, ranked business opportunities — powered by LLM-driven extraction, validation, and scoring.

The Technical Signal Processing Pipeline

Five automated stages take a raw market signal to a scored, structured opportunity

Layer 1 — Ingestion & Data Harvesting

Harvesting high-value public-sector signals

Layer 2 — Relational Persistence

Layer 3 — Theme Extraction & Validation

A resilient pipeline that extracts up to 5 trending themes by domain without letting the AI break the system

Layer 4 — Strategic Opportunity Mapping

Scaling context to a 16,384-token window to turn themes into commercial insight

The matrix maps each theme across four commercial dimensions:

1

Use Cases

Concrete ways the technology gets applied in the real world

2

Value Drivers

The business outcomes and ROI levers behind each use case

3

Target Audience

Buyer personas, industry verticals mapped by function

4

Geography

Operational zones and regional demand concentration

Layer 5 — Advanced Scoring & Storage

A mathematical, multi-dimensional framework for ranking opportunities

Signal Classification

Diverse text phrases are mapped into three clean, searchable corporate categories:
